

inferences

all model outputs are aggregated in a public dashboard for monitoring policy execution.

transparency "for" subjects
improvement of policy

Overall statistics

total days
days fraud

Contributors & explainability

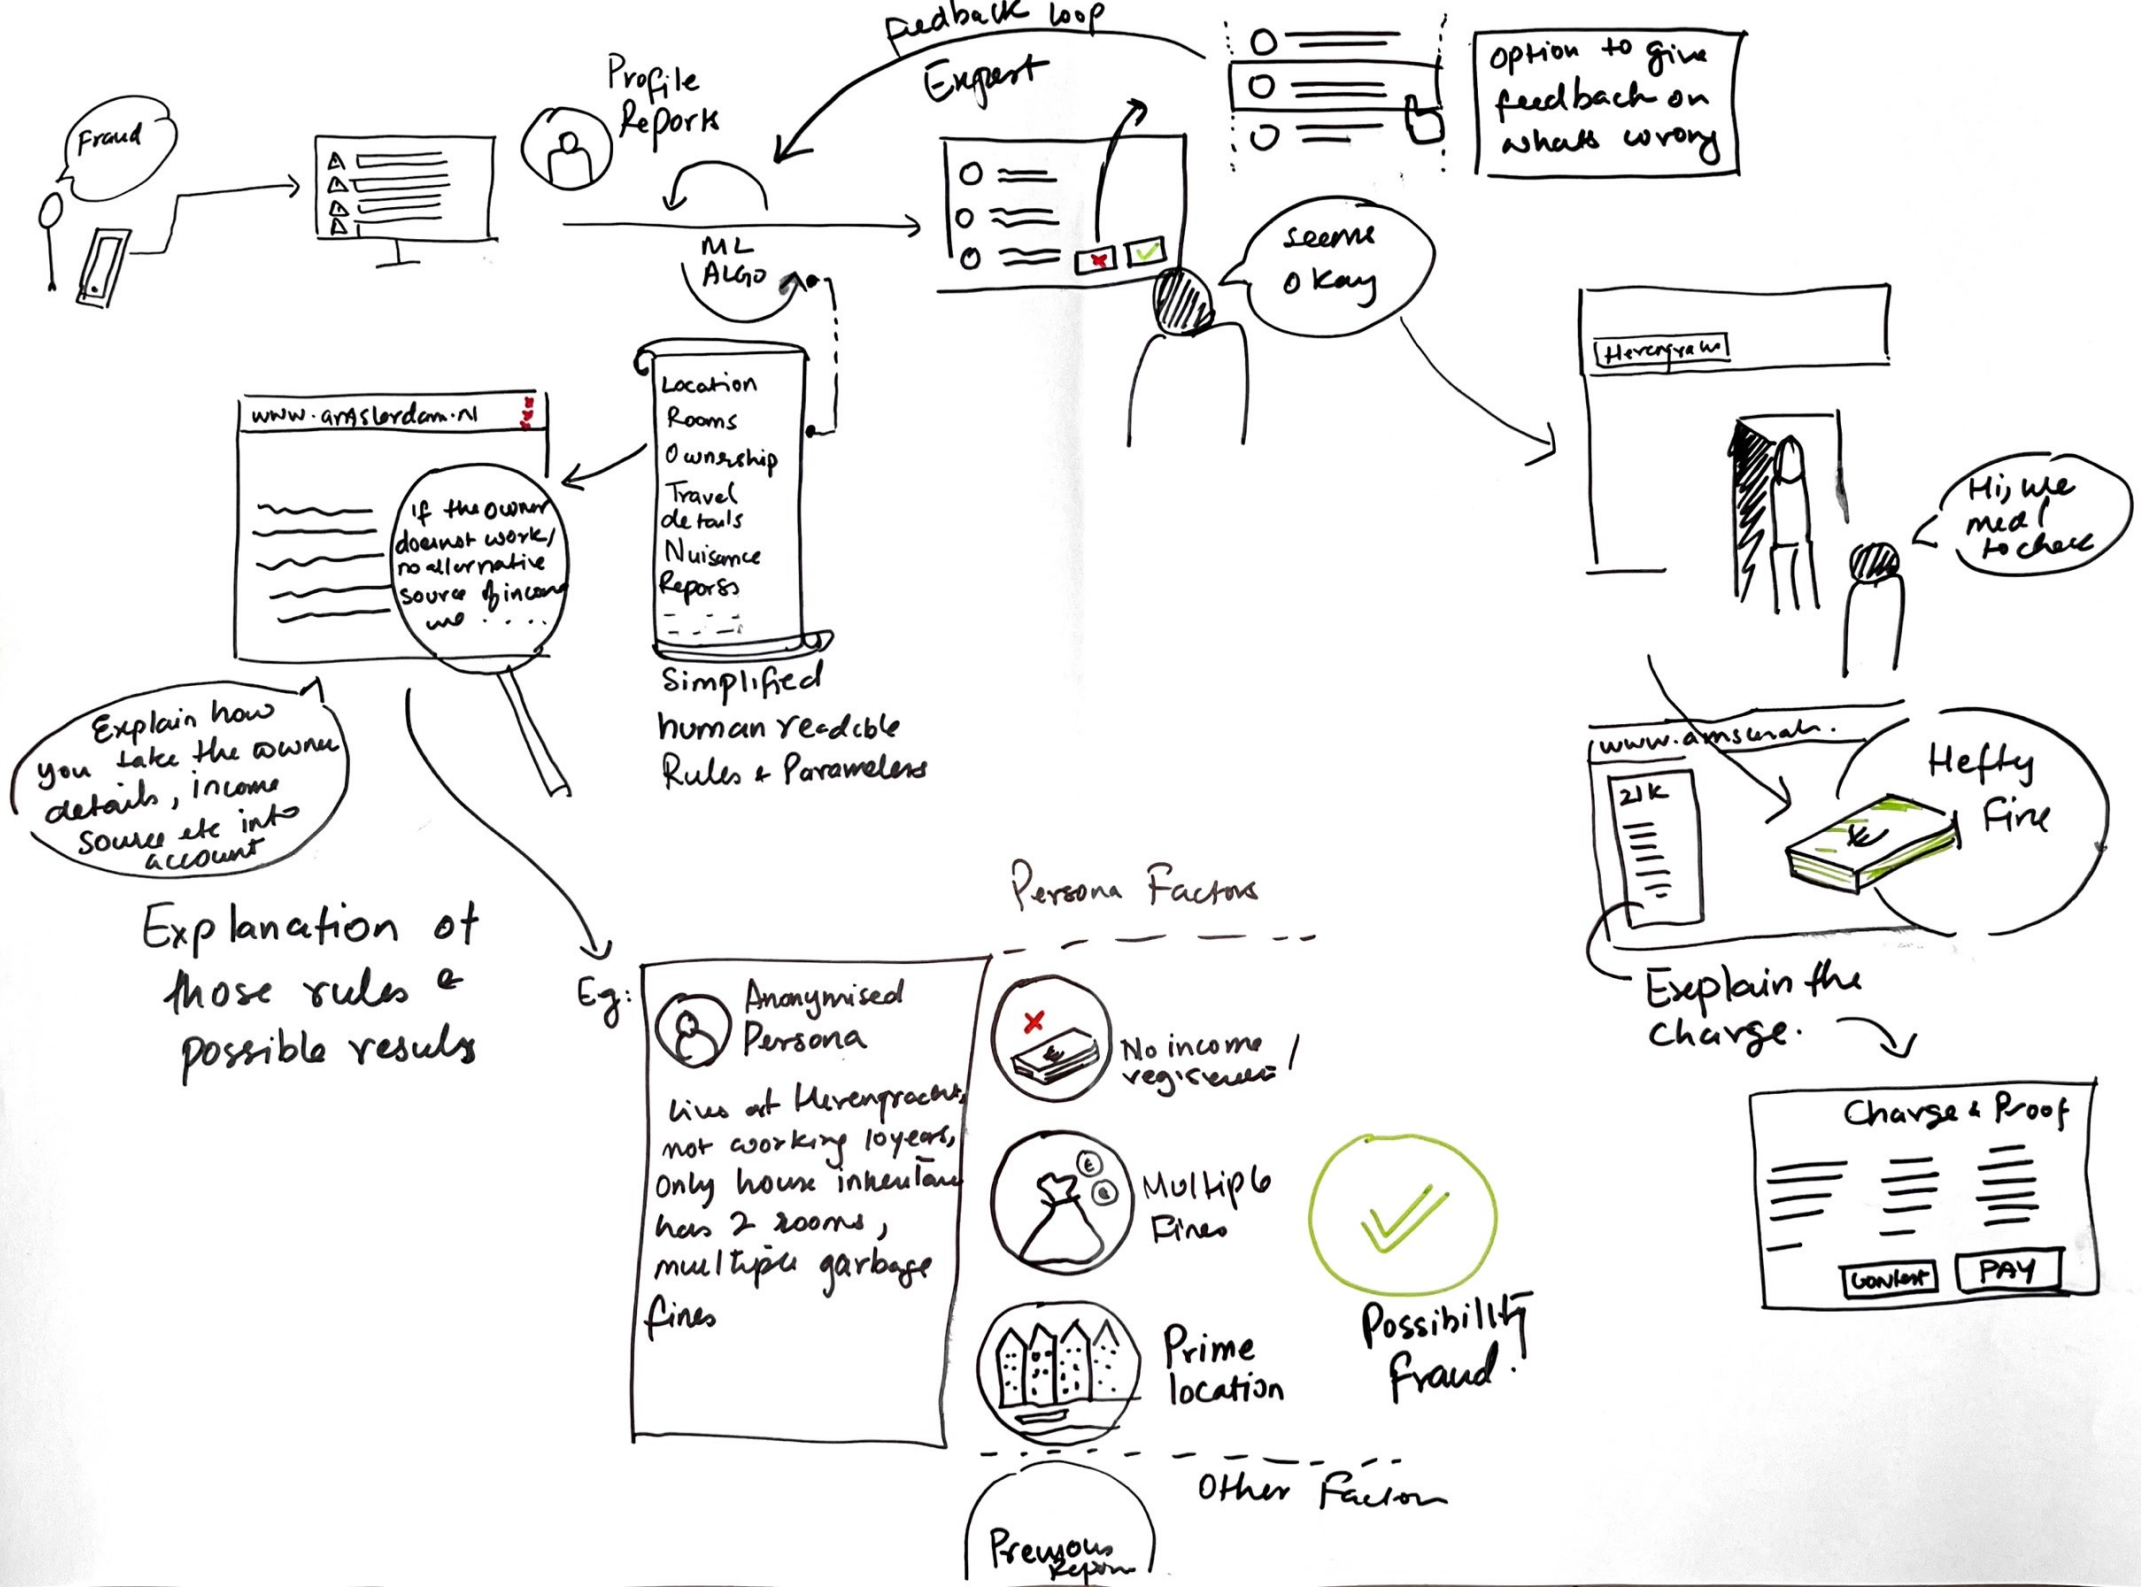

area
reg-avail.
prev. rented
days
owner-age

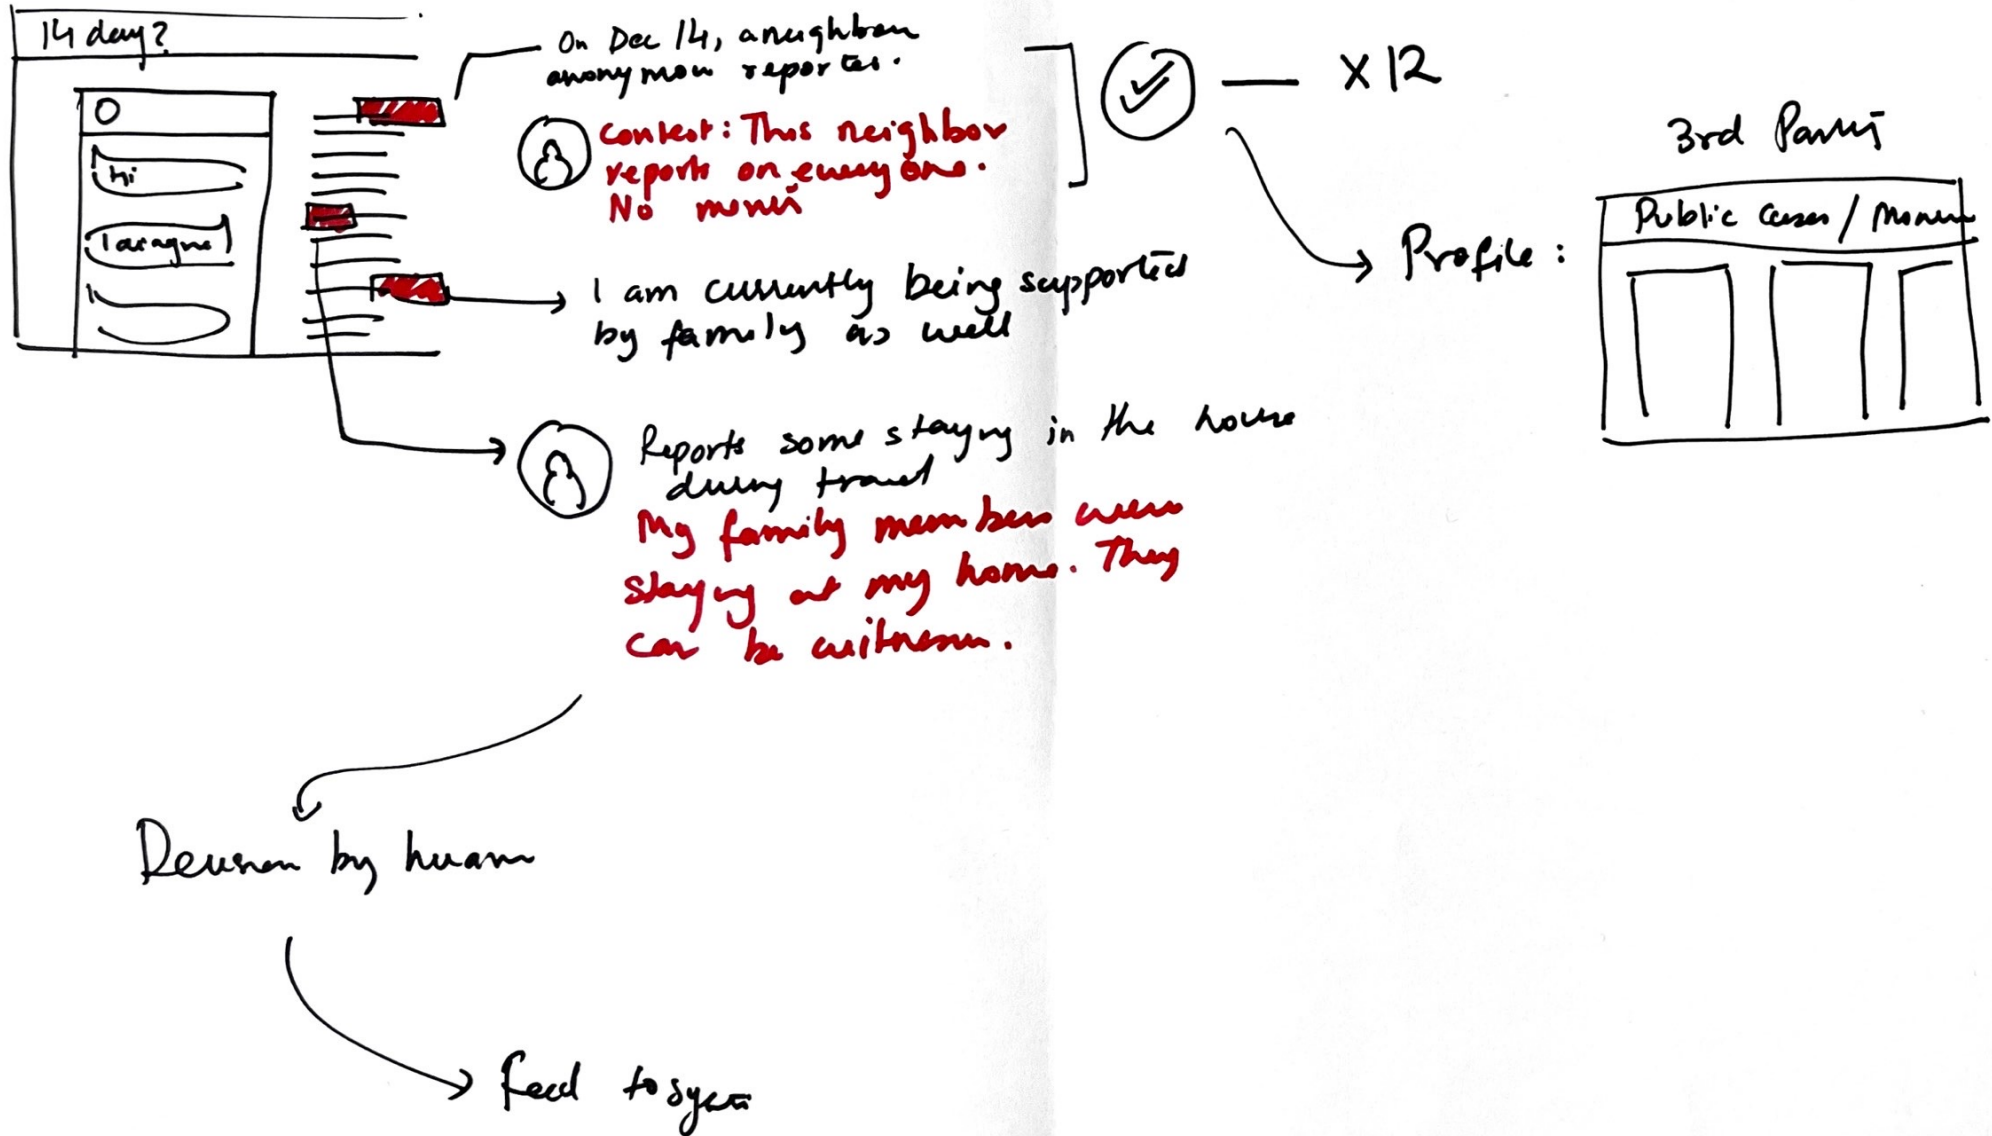

- in centre, more fraud
- when the owner has logged all days, less fraud
- older owners have a bigger chance of breaking the law ⚠

Bras

drift over time

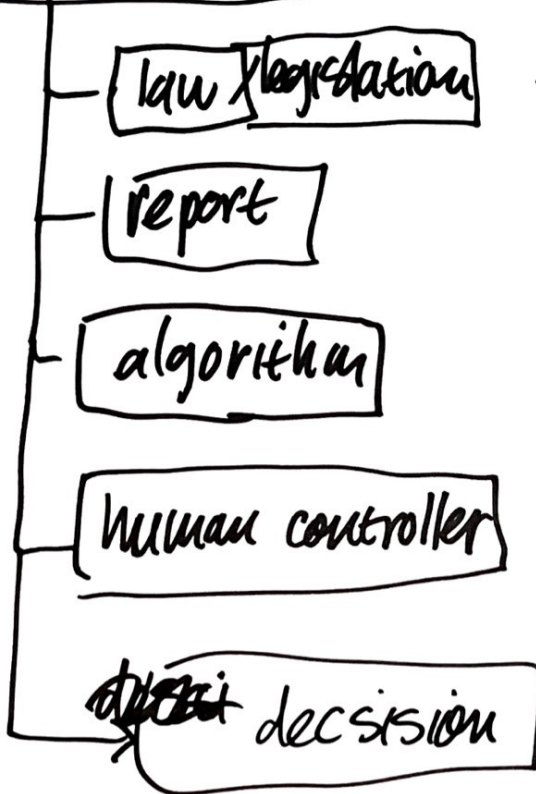

CONTESTING Process (Policy & Sytem)

Make vacation rental system
more contestable

Contest everything

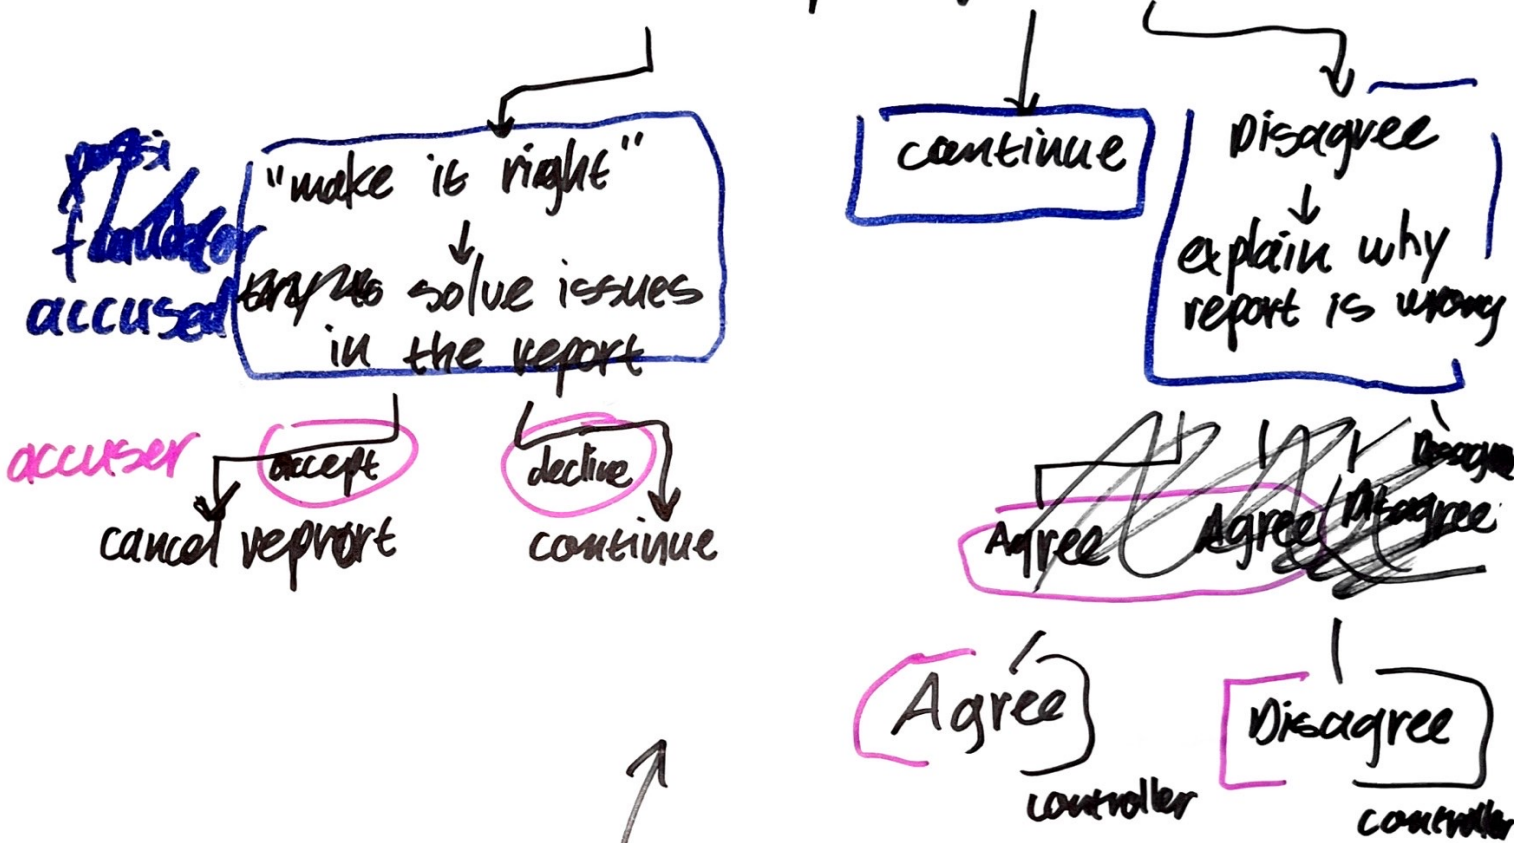

→ systems of contesting
are in place (?)

↓
But we want to
be tough : why?

Context everything: report

notification: someone filed
a report against you

But... more manpower...

Not[↓] if we let
accused + accuser
handle things

↓
+ empathy B

contest everything:
algorithm

- Use Kars' ideas 😊 → Feedback to algorithm from - decision subject

Notification:

- ~~the~~ filed report +

algorithm analysis

└ ^{point out} errors in data

└

- Human controller
